

## Current Events Contract Items

In order to expand the scope of your experiences in Physics and to give everyone a better sense of what is happening today in science, everyone will be exploring a science topic in the news as part of every contract. This may mean reading one or more newspaper or magazine articles or a part of a book, interviewing someone who works in a science-related field, watching a Nova or other science show on television, or finding out about something on the Internet.

Your job will be to explore something that interests you and write a brief summary of the most important ideas. The summary something like a page long and can be written as a journal entry or can be word processed, double spaced on a separate piece of paper. It should have a title and date of publication or broadcast that includes enough information for anyone to be able to find your source easily. Above all, it *should be in your own words*, describing ohow you understood the main ideas that were presented. If it's too complex or difficult for you to truly understand, choose another item.
