Article Title: DNA comparison of Africa's ethnic groups ^{genetic diversity}
genetic diversity

Reading Summary: *Include main ideas and supporting ideas*

Commentary: *Include 1-5 scale of understanding and topic/words you didn't understand*

- There is greater genetic diversity than people understood
- since people originated in Africa there is more time for the DNA to change
- the changes are similar to culture changes by area
- The most distinct and therefore oldest genetic sequences is from the San bushmen. Their location could be from where everyone migrated
- their study is only just starting
- African-American have 71% of DNA from Africa

4 - some things were just a little easy in general

Your Reaction:

I think it is interesting how we can find this all out. I do not really understand the point though. what can we do with the info that they found besides have cool facts.
