In Exercises 71–74, find the angle in radians.

In Exercises 75–78, find the radian measure of the central angle of a circle of the given radius that intercepts an arc of the given length.

	Radius	Arc Length
75.	15 inches	4 inches
76.	16 feet	10 feet
77.	14.5 centimeters	25 centimeters
78.	80 kilometers	160 kilometers

In Exercises 79–82, find the length of the arc on a circle of the given radius intercepted by the given central angle.

	Radius	Central Angle
79.	15 inches	$180^\circ$
80.	9 feet	$60^\circ$
81.	6 meters	2 radians
82.	40 centimeters	$3\pi/4$ radians

**Distance Between Cities** In Exercises 83–86, find the distance between the cities. Assume that earth is a sphere of radius 4000 miles and the cities are on the same meridian (one city is due north of the other).

City	Latitude
83. Dallas, Texas	$32^\circ 47' 9''$ N
Omaha, Nebraska	$41^\circ 15' 42''$ N
84. San Francisco, California	$37^\circ 46' 39''$ N
Seattle, Washington	$47^\circ 36' 32''$ N
85. Miami, Florida	$25^\circ 46' 37''$ N
Erie, Pennsylvania	$42^\circ 7' 15''$ N
86. Johannesburg, South Africa	$26^\circ 10' S$
Jerusalem, Israel	$31^\circ 47' N$

# A.5 Conversions

**NOTE** Note that when no units of angle measure are specified, *radian measure is implied*. For instance, if you write  $\theta = \pi$  or  $\theta = 2$ , you should mean  $\theta = \pi$  radians or  $\theta = 2$  radians. ■■

## CONVERSIONS BETWEEN DEGREES AND RADIANS

1. To convert degrees to radians, multiply degrees by  $\frac{\pi \text{ rad}}{180^\circ}$ .
2. To convert radians to degrees, multiply radians by  $\frac{180^\circ}{\pi \text{ rad}}$ .

To apply these two conversion rules, use the relationship  $\pi \text{ rad} = 180^\circ$ .

### EXAMPLE 3 Converting from Degrees to Radians

- $135^\circ = (135 \text{ deg}) \left( \frac{\pi \text{ rad}}{180 \text{ deg}} \right) = \frac{3\pi}{4} \text{ rad}$  Multiply by  $\pi/180$ .
- $540^\circ = (540 \text{ deg}) \left( \frac{\pi \text{ rad}}{180 \text{ deg}} \right) = 3\pi \text{ rad}$  Multiply by  $\pi/180$ .
- $-270^\circ = (-270 \text{ deg}) \left( \frac{\pi \text{ rad}}{180 \text{ deg}} \right) = -\frac{3\pi}{2} \text{ rad}$  Multiply by  $\pi/180$ .

**NOTE** If you have a calculator with a “radian-to-degree” conversion key, try using it to verify the result shown in part (c) of Example 4. ■■

### EXAMPLE 4 Converting from Radians to Degrees

- $-\frac{\pi}{2} \text{ rad} = \left( -\frac{\pi}{2} \text{ rad} \right) \left( \frac{180 \text{ deg}}{\pi \text{ rad}} \right) = -90^\circ$  Multiply by  $180/\pi$ .
- $\frac{9\pi}{2} \text{ rad} = \left( \frac{9\pi}{2} \text{ rad} \right) \left( \frac{180 \text{ deg}}{\pi \text{ rad}} \right) = 810^\circ$  Multiply by  $180/\pi$ .
- $2 \text{ rad} = (2 \text{ rad}) \left( \frac{180 \text{ deg}}{\pi \text{ rad}} \right) = \frac{360}{\pi} \approx 114.59^\circ$  Multiply by  $180/\pi$ .

## TECHNOLOGY

$$1' = 1 \text{ minute} = \frac{1}{60}(1^\circ)$$

$$1'' = 1 \text{ second} = \frac{1}{3600}(1^\circ).$$

With calculators it is convenient to use *decimal* degrees to denote fractional parts of degrees. Historically, however, fractional parts of degrees were expressed in *minutes* and *seconds*, using the prime (') and double prime (") notations, respectively. Consequently, an angle of 64 degrees, 32 minutes, and 47 seconds, is represented by  $\theta = 64^\circ 32' 47''$ . Many calculators have special keys for converting an angle in degrees, minutes, and seconds ( $D^\circ M' S''$ ) into decimal degree form, and vice versa.

In Exercises 47–54, convert the measure from degrees to radians. Round to three decimal places.

**Distance Between Cities** In Exercises 83–86, find the distance between the cities. Assume that earth is a sphere of radius 4000 miles and the cities are on the same meridian (one city is due north of the other).

City	Latitude
83. Dallas, Texas	$32^\circ 47' 9''\text{N}$
Omaha, Nebraska	$41^\circ 15' 42''\text{N}$
84. San Francisco, California	$37^\circ 46' 39''\text{N}$
Seattle, Washington	$47^\circ 36' 32''\text{N}$
85. Miami, Florida	$25^\circ 46' 37''\text{N}$
Erie, Pennsylvania	$42^\circ 7' 15''\text{N}$
86. Johannesburg, South Africa	$26^\circ 10'\text{S}$
Jerusalem, Israel	$31^\circ 47'\text{N}$

**87. Difference in Latitudes** Assuming that earth is a sphere of radius 6378 kilometers, what is the difference in latitude of two cities, one of which is 600 kilometers due north of the other?

**88. Difference in Latitudes** Assuming that earth is a sphere of radius 6378 kilometers, what is the difference in latitude of two cities, one of which is 800 kilometers due north of the other?

## E5 Converting Radian &amp; Degrees

Date \_\_\_\_\_ Period \_\_\_\_\_

Convert each radian measure into degrees.

(choose 2)

1)  $\frac{5\pi}{6}$

2)  $\frac{7\pi}{4}$

3)  $\frac{2\pi}{3}$

4)  $\frac{3\pi}{4}$

Convert each degree measure into radians.

(choose 2)

5)  $240^\circ$

6)  $60^\circ$

7)  $300^\circ$

8)  $330^\circ$

Convert each degree measure into radians and each radian measure into degrees.

(choose 3)

9)  $-\frac{13\pi}{6}$

10)  $-525^\circ$

11)  $\frac{11\pi}{6}$

12)  $345^\circ$

13)  $-\frac{17\pi}{6}$

14)  $930^\circ$

## Answers to E5 Converting Radian & Degrees (ID: 1)

1)  $150^\circ$

2)  $315^\circ$

3)  $120^\circ$

4)  $135^\circ$

5)  $\frac{4\pi}{3}$

6)  $\frac{\pi}{3}$

7)  $\frac{5\pi}{3}$

8)  $\frac{11\pi}{6}$

9)  $-390^\circ$

10)  $-\frac{35\pi}{12}$

11)  $330^\circ$

12)  $\frac{23\pi}{12}$

13)  $-510^\circ$

14)  $\frac{31\pi}{6}$
